ANNEX IV

CRITERIA FOR REGIONALIZATION

1. The criteria for the definition of an area or zone should take into account appropriate international standards and include:

   — the geographical conditions,

   — the epidemiological situation,

   — patterns of trade,

   — the meteorological conditions,

   — the distribution of vectors and alternative or secondary hosts,

   — administrative boundaries,

   — effective control of movement across the boundaries of the area,

   — effective control[1] and surveillance measures within the non-free area, zone and free area as appropriate,

   — the eco-system including the agronomy and the environment.

2. A protected zone, as defined in Council Directive 77/93/EEC, Article 2 (1) (h)[2] shall be considered as a zone where there is effective control on plants, plant products and other objects moving into or within the zone and effective surveillance measures as detailed in Commission Directive 92/70/EEC[3], within the zone

   — in which one or more pests, which are established in one or more parts, are not endemic or established, despite favourable conditions for them to become established therein,

   — in which there is a danger that certain pests will establish themselves, given propitious ecological conditions, for particular crops, despite the fact that these pests are not endemic or established.

---

[1] With respect to plant health, control means here suppression, containment or eradication of a pest population.

ANNEX VII

IMPORT AND TRANSIT PROCEDURES

A. SANITARY PART

The Parties recognize the distinction between documentary, identity and physical checks carried out on imports of live animals and animal products.

1. Import checks

(i) *Live animals*

1. Documentary checks

Documentary checks will be carried out on 100 % of consignments. It means that veterinary certificates or veterinary documents required by the legislation have to be controlled to confirm that the form and the content are fulfilling the legal requirements.

2. Identity checks

Identity checks will be carried out on all consignments to confirm the correspondence between the documents referred to in paragraph 1 and the consignment itself.

3. Physical checks

The aim of the physical checks is to ensure that the animals meet the guarantees mentioned on the documents referred to in paragraph 1 and that they are clinically healthy. The guarantee of origin certified by the third country must accordingly be verified as well as the transport and the animal welfare conditions. In principle every animal of a consignment should be physically checked. This physical check may include sampling and testing procedures.

In principle the physical check must include, in particular, a clinical examination of all the animals.

By way of derogation to the clinical examination the following shall apply:

(a) animals for fattening, 10 % of animals in a consignment with a minimum of 10 animals;

(b) animals for direct slaughtering: visual examination;

(c) poultry, birds, aquaculture animals including fish, rodents including lagomorphs, bess and other insects, reptiles, other invertebrates, dangerous zoo animals: examination of the general health status and behaviours or of a representative of animals;

(d) pathogens free animals: physical examination should take place only in case of presence of a risk of an irregularity.

4. Transits

Similar checks as laid down above shall apply for transits of live animals.

(ii) *Products of animal origin*

1. Documentary checks

Documentary checks will be carried out on 100 % of consignments, veterinary certificates, veterinary documents or other documents required by the legislation have to be controlled to confirm that the form and the content are fulfilling the legal requirements.

2. Identity checks

Identity checks will be carried out on consignments to confirm the correspondence between the documents referred to in paragraph 1 and the consignment itself.

3. Physical checks

The aim of the physical check is to ensure that the products still meet the purpose mentioned on the documents referred to in paragraph 1. The guarantees of origin certified by the third country must accordingly be verified while ensuring that the subsequent transport of the products has not altered their original conditions. In the light of the inspections and controls undertaken by the exporting country and the experience gained, the following factors will be applied to the rates of checking frequencies set out in Annex I to Commission Decision 94/360/EC, it being understood that the resulting rates are to be considered as maximum rates. This physical check may include sampling and testing procedures.

Groups of products and the frequencies of checks to be applied by the contracting parties for products where equivalent trade conditions have been agreed and lists of 'approved' establishments (animal health and public health) have been laid down where necessary, are listed in Annex VII (A) (2).

Notwithstanding the agreed checks and the reduced frequencies laid down in this Protocol additional checks may be carried out in cases of suspicion.

4. Transits

The checks as laid down in paragraphs 1 above shall apply. Identity and/or physical checks may be carried out in cases of suspicion.
