Всяка експозиция се разпределя в една от следните категории: а) <= 0,5 милиона евро; б) > 0,5 милиона евро <= 1 милион евро; в) > 1 милион евро <= 1,5 милиона евро; г) > 1,5 милиона евро <= 5 милиона евро; д) > 5 милиона евро <= 10 милиона евро; е) > 10 милиона евро <= 50 милиона евро; ж) > 50 милиона евро; з) не се прилага.

Диапазонът на индексираното съотношение между размера на заема и стойността на имота се изчислява консервативно и трябва да отговаря най-малко на следните условия: а) Общ размер на заема: непогасената част от ипотечния заем плюс всяка неусвоена сума по ипотечния заем, за която е поет ангажимент за отпускане (след прилагане на съответния кредитен конверсионен коефициент). При изчисляването на размера на заема се включват всички корекции за специфичен кредитен риск, както и всички останали заеми (в това число предоставените от други финансови институции заеми, за които институцията е осведомена), обезпечени с права на залог върху същия жилищен недвижим имот, които са от същата или от по-висока степен спрямо правото на залог, с което е обезпечен заемът. Ако няма достатъчно информация, въз основа на която да се определи степента на останалите права на залог, институцията приема, че те се степенуват *pari passu* с правото на залог, обезпечаващо заема.

Колона		Позоваване на съответния правен акт	Указания
			б) Стойност на недвижимия имот: стойността на недвижимия имот е независимата оценка на имота в даден момент (най-вероятно — при отпускането на заема), която се превръща в текуща стойност, като се използва индекс на цените на недвижимите имоти. Оценката следва да се извършва независимо от оценители, които отговарят на специални изисквания за квалификация. Изискванията за квалификация и минималните стандарти за оценка трябва да изпълняват следните условия: — оценката на имота трябва да е индивидуална и стойността му да е определена консервативно (напр. като се изключват очаквания за бъдещо повишаване на цената и като се отчита възможността през срока на заема текущата цена на имота да надхвърли дадено устойчиво равнище, например поради ценови балон при недвижимите имоти); — ако може да се определи пазарната стойност, стойността по оценка трябва да не надвишава пазарната стойност; — стойността по оценка трябва да е обоснована с адекватна документация за оценката. От институциите се изисква да документират своите изчисления и при поискване да предоставят документите на компетентния по отношение на тях орган. Категориите на индексираното съотношение между размера на заема и стойността на имота са: а) <= 25 %; б) > 25 % <= 50 %; в) > 50 % <= 75 %; г) > 75 % <= 100 %; д) > 100 % <= 125 %; е) > 125 %; ж) не се прилага.“

ЧАСТ I: ОБЩИ УКАЗАНИЯ

1. Представят се данни само за контрагентите с действителна експозиция или валиден рейтинг.

2. Представят се данни само за експозициите, за които има одобрен вътрешен модел.

3. За част II се прилага следното:

   а) при абсолютните стойности се докладва сборът на стойностите;

   б) при процентните стойности се докладва среднопретеглената стойност, като за тегло се използва експозицията при неизпълнение;

   в) като изключение от буква б) — при изчисляване на конверсионния коефициент като тегло се използва първоначалната експозиция, т.е. стойността, към която се прилага конверсионен коефициент, за да се получи експозицията при неизпълнение, след като са взети под внимание методите за редуциране на кредитния риск с ефект на заместване върху експозицията (колона 090 в образци 101, 102 и 103).

ЧАСТ II: УКАЗАНИЯ ОТНОСНО ОБРАЗЦИТЕ

С 101 — Данни за експозициите в портфейли с нисък риск от неизпълнение на задълженията по контрагенти

Колона	Обозначение	Позоваване на съответния правен акт	Указания
010	Код на контрагента	Колона 010 от образец 101 от приложение I към настоящия регламент за изпълнение.	Докладва се определеният от ЕБО код на контрагента, включен в извадките от портфейли с нисък риск от неизпълнение на задълженията. Този код представлява идентификатор на реда и трябва да е уникален за всеки ред от таблицата.
020	Клас експозиции	Точка 78 от приложение II към Регламент за изпълнение (ЕС) № 680/2014 на Комисията.	Всеки портфейл се причислява към един от следните класове експозиции: а) „Централни банки и централни правителства“; б) „Институции“; в) „Предприятия — МСП“; г) „Предприятия — Специализирано кредитиране“; д) „Предприятия — Други“; е) „Експозиции на дребно — обезпечени с недвижими имоти на МСП“; ж) „Експозиции на дребно — обезпечени с недвижими имоти на субекти, различни от МСП“; з) „Експозиции на дребно — квалифицирани револвиращи“; и) „Експозиции на дребно — други МСП“ й) „Експозиции на дребно — други субекти, различни от МСП“; к) не се прилага ([1]).
030	Регулаторен подход		Използваният подход за изчисляване на капиталовите изисквания, който се докладва, е един от следните: а) основен вътрешнорейтингов подход; б) усъвършенстван вътрешнорейтингов подход; в) разграничителни критерии във връзка със специализираното кредитиране; г) не се прилага. Когато за експозициите от даден портфейл се прилага повече от един подход, експозициите се разделят и се докладват отделно за всеки подход, като се използват съответните уникални кодове на контрагента.
040	Рейтинг		Докладва се степента от вътрешния рейтинг, който прилага институцията (от най-ниския до най-високия риск, като се изключват неизпълненията с вероятност от неизпълнение, отговаряща на 100 %). Тя следва поредността на номерата 1, 2, 3 и т.н.
050	Дата, на която е определен най-новият рейтинг на контрагента		Докладва се датата, на която е определен най-новият рейтинг на контрагента.

Колона	Обозначение	Позоваване на съответния правен акт	Указания
060	Вероятност от неизпълнение	Колона 010 от образец 8.1 от приложение I към Регламент за изпълнение (ЕС) № 680/2014 на Комисията	Вероятността от неизпълнение, приписана на категории или групи длъжници, за която се докладва, се основава на разпоредбите на член 180 от Регламент (ЕС) № 575/2013. За всяка отделна категория или група се докладва вероятността от неизпълнение, приписана на конкретната категория или група длъжници. За стойностите, съответстващи на сумираните категории или групи длъжници (напр. общо експозиции), се докладва среднопретеглената според експозициите стойност на вероятностите от неизпълнение, приписани на категориите или групите длъжници, които са включени в сумата. За изчисляване на среднопретеглената според експозициите стойност на вероятностите от неизпълнение се използва стойността на експозицията (колона 120). Вероятността от неизпълнение се изразява като стойност между 0 и 1. За всяка отделна категория или група се докладва вероятността от неизпълнение, приписана на конкретната категория или група длъжници. Всички докладвани параметри на риска се извеждат от параметрите на риска, които се използват във вътрешнорейтинговата система, одобрена от съответния компетентен орган. Нито е предвидено, нито е желателно да се използва надзорна генерална скала. Ако докладващата институция прилага уникална рейтингова система или може да докладва съгласно вътрешна генерална скала, се използва вътрешната генерална скала. В противен случай различните рейтингови системи се обединяват и подреждат съгласно следните критерии: а) категориите длъжници от различните рейтингови системи се групират и се подреждат от по-ниската към по-високата вероятност от неизпълнение, приписана на всяка категория длъжници; б) когато институцията използва голям брой категории или групи, тя може да се договори с компетентните органи да докладва по по-малък брой категории или групи. Ако институцията желае да докладва по брой категории, който е различен от вътрешния брой категории, тя е длъжна да се свърже предварително с компетентния по отношение на нея орган.

Когато институцията не е в състояние да изчисли процента на неизпълнение за последните 5 години, тя е длъжна да разработи заместващ показател, като използва своите данни от възможно най-голям период с продължителност до 5 години, и да представи на компетентния по отношение на нея орган документацията, в която е описано изчислението.
210	Процент на загуба през последната година	Колони 040 и 070 от образец 9.2 от приложение I към Регламент за изпълнение (ЕС) № 680/2014 на Комисията; Делегиран регламент (ЕС) № 183/2014 на Комисията	Докладва се процентът на загуба, наблюдаван през последната година. Процентът на загуба означава сборът от корекциите за кредитен риск и отписванията за експозициите, които са класифицирани като „експозиции в неизпълнение“ през последната година (колона 070 от образец 9.2 от приложение I към Регламент за изпълнение (ЕС) № 680/2014 на Комисията), разделен на размера на наблюдаваните нови неизпълнения през последната година (колона 040 от образец 9.2 от приложение I към Регламент за изпълнение (ЕС) № 680/2014 на Комисията).
220	Процент на загуба през последните 5 години	Колони 040 и 070 от образец 9.2 от приложение I към Регламент за изпълнение (ЕС) № 680/2014 на Комисията	Докладва се среднопретеглената според експозициите стойност на процентите на загуба, наблюдавани през последните 5 години. За начина на определяне на процента на загуба вж. колона 210. Ако институцията не е в състояние да изчисли процента на загуба за последните 5 години, тя е длъжна да разработи заместващ показател, като използва своите данни от възможно най-голям период с продължителност до 5 години, и да представи на компетентния по отношение на нея орган документацията, в която е описано изчислението.
230	Рисково претеглени активи*		Институциите изчисляват и докладват рисково претеглените активи* за портфейлите „Предприятия“, „Предприятия — МСП“, „МСП на дребно“ и „Експозиции на дребно — обезпечени с недвижими имоти“ на равнището на целия портфейл и на равнище държава. Портфейлите са дефинирани в образец 103 от приложение I към настоящия регламент за изпълнение и са обозначени със следните идентификационни кодове на портфейли: а) CORP0007 [„*Предприятия*“]; б) SMEC0008 [„*Предприятия — МСП*“]; в) SMER0008 [„*МСП на дребно*“]; г) MORT0010 [„*Ипотеки*“]; д) CORP0007<Код на вида риск>; е) SMEC0008<Код на вида риск>; ж) SMER0008<Код на вида риск>; з) MORT0010<Код на вида риск>;

Не се взема под внимание никаква компенсация между рейтинговите степени. PD* е най-малката оценка на PD, за която би бил изпълнен едностранният биномен тест (основан на нормална апроксимация на биномно разпределение с гаранционна вероятност 97,5 %). PD* = min PD*, така че: $$PD^{*} + \Phi^{-1}(q) \cdot \sqrt{\frac{PD^{*} \cdot (1 - PD^{*})}{n}} > DR_{1y}$$ Като: PD* = вероятността от неизпълнение за рейтинговата степен; φ^{-1} = обратната функция на стандартното нормално разпределение; q = гаранционната вероятност; DR_{1y} = претегленият според броя на случаите на неизпълнение процент на неизпълнение за последната година за рейтинговата степен; n = броят на длъжниците, които не са били в неизпълнение в началото на периода. Ако забраната да се вземат под внимание компенсациите между рейтинговите степени води до ситуация, при която за дадена рейтингова степен PD* е по-малка от PD, то при изчислението на размера на рисково претеглените експозиции за тази рейтингова степен се използва PD.

РАЗДЕЛ 3: ПОРТФЕЙЛИ ЗА КОРЕЛАЦИОННО ТЪРГУВАНЕ 2824

ОБЩИ УКАЗАНИЯ

Институцията е длъжна да прилага всички изброени по-долу указания:

а) Освен ако в описанието на портфейла изрично е посочено друго, всички позиции трябва да се включат в търговския портфейл на 13 октомври 2016 г. След като позициите се включат в търговския портфейл, жизненият цикъл на всеки портфейл трябва да трае, докато трае сравнителният анализ. Освен това изчисленията трябва да се правят при допускането, че докато трае сравнителният анализ, институцията няма да предприеме никакви действия за управление на портфейла. Освен ако в спецификациите на конкретния портфейл изрично е посочено друго, цените на упражняване на опционните позиции се определят спрямо цените на базовия актив, наблюдавани при затварянето на пазара на 13 октомври 2016 г.

б) За целите на валидирането на предварителния сравнителен анализ оценката на всеки портфейл се представя на компетентния по отношение на институцията орган в срок до [дата на влизане в сила]. Първоначалната пазарна оценка означава сборът на пазарната стойност към датата на включване в портфейла и нереализираното салдо (т.е. печалба или загуба, която е възникнала, но още не е реализирана или която би била реализирана, ако позицията бъде закрита) в периода между датата на включването в портфейла и датата и часа на оценката. Затова първоначалната пазарна оценка означава пазарната стойност към датата и часа на оценката Оценката ще се извърши на 27 октомври 2016 г., 17:30 часа CET (16:30 часа GMT).

в) Рисковете на позициите се изчисляват, без да се вземат предвид разходите за финансиране.

г) Доколкото е възможно, при извършването на оценката на рисковете на портфейлите се изключва кредитният риск от контрагента.

д) Десетдневната 99-процентна стойност под риск (VaR) се изчислява ежедневно. Стресираната стойност под риск (sVaR) и изискването за допълнителния риск от неизпълнение и миграционния риск може да се изчисляват ежеседмично, като трябва да се основават на цените в края на деня- за всеки петък през периода на извършване на сравнителния анализ.

е) Резултатите за всеки портфейл се докладват в основната валута на портфейла, както се изисква в таблиците по-долу.

ж) За сделките, които включват дълги позиции в суапове за кредитно неизпълнение, се приема, че съгласно пазарните конвенции е платена незабавна предварителна такса за откриване на позицията. Приема се, че датите на падеж за всички позиции в суапове за кредитно неизпълнение, включени в анализа, следват конвенционалните тримесечни дати на прекратяване.

з) Допълнителните спецификации, необходими за извършване на изчисленията във връзка с ценообразуването на позициите в суапове за кредитно неизпълнение, се изготвят по начин, който е в съответствие с обичайно използваните пазарни стандарти и конвенции.

и) Използва се датата на падеж, която гарантира, че сделката е възможно най-близко до посочения срок до падежа.

й) По отношение на съществените данни от продуктовата спецификация, които не са изрично посочени в настоящото приложение, заедно с резултатите се представят и използваните допускания, включително конвенция за броене на дните, както и изборът на търгуем и ликвиден инструмент, когато е разрешено.

к) Съкращенията ATM, OTM и ITM обозначават относителната позиция на текущата или бъдещата цена на базовия актив на деривата спрямо цената на упражняване на този дериват (относителна вътрешна стойност). Съкращението ATM е образувано от израза „at the money“ („на пари“ [т.е. без печалба/загуба]), OTM — от израза „out of the money“ („извън пари“ [т.е. със загуба]), а ITM — от израза „in the money“ („в пари“ [т.е. с печалба]).

л) Освен ако в портфейла изрично е посочено друго, всички опции трябва да се третират така, сякаш се търгуват извънборсово.

м) При извънборсовите опции се следват стандартните конвенции за отчитане на времето (т.е. датата на изтичане е работният ден, следващ деня, в който не се провежда търговска сесия). Конвенцията за отчитане на времето за опции е следната: срокът до падежа за *n*-месечна опция е *n* месеца. Когато опциите изтичат в ден, в който не се провежда търговска сесия, датата на изтичане е работен ден, който институциите определят съгласно общоприетите пазарни практики.

н) Всички извънборсови опции се третират, както следва:

— като американски при капиталови инструменти на едно лице и при стоки;

— като европейски при капиталови индекси, валути и суапции.

о) При всички опции се изключва премията от изчисленията на първоначалната пазарна стойност, така че опциите се считат за непокрити.

п) Що се отнася до портфейлите за корелационно търгуване, IM обозначава показателите за риска, които се получават при изчисленията по вътрешен модел за портфейлите за корелационно търгуване съгласно член 377 от Регламент (ЕС) № 575/2013. Посочено е в раздела за всички ценови рискове в приложение VI към настоящия регламент за изпълнение.

р) При позициите, които са деноминирани в обща основна валута, но включват един или повече инструменти, деноминирани в друга валута, първоначалната пазарна оценка се конвертира в общата основна валута на портфейла, като се използва съответният валутен спот курс в края на датата на включване в търговския портфейл (13 октомври 2016 г.). Общата основна валута на портфейла, използвана при конвертирането на първоначалната пазарна оценка, се използва и за печалбата и загубата, показателите за риска и стресираните стойности (VaR, sVaR, изискването за допълнителния риск от неизпълнение и миграционния риск, всички ценови рискове), като се използва подходящият валутен курс.

с) При включването на позициите в търговския портфейл институциите трябва да следват съответните пазарни конвенции, освен ако не е посочено друго. В следващите раздели дълга позиция означава покупка, а къса позиция — продажба. Съгласно стандартните пазарни практики при суаповете за кредитно неизпълнение дълга позиция означава покупка на защита, а къса позиция — продажба на защита.

т) Когато даден инструмент е обект на корпоративно действие, включително изкупуване от страна на емитента или неизпълнение, или други подобни действия, институциите изключват този инструмент от портфейла, заедно с всички свързани с него суапове за кредитно неизпълнение или опции.

у) „Най-актуална серия“ означава серията на индекса, която е най-ликвидната и търгуема серия от конкретния индекс, която е налична на пазара. Институциите предоставят информация за избраната от тях серия на индекса, заедно с информацията за резултатите, в съответното поле в образците.

ф) Европейският междубанков лихвен процент (EURIBOR) е лихвеният процент, който Европейският институт за паричните пазари (European Money Markets Institute) изчислява за различните падежи на междубанковите срочни депозити в евро.

х) Лондонският междубанков лихвен процент (LIBOR) е лихвеният процент, който Междуконтиненталната борса (Intercontinental Exchange) изчислява за различните падежи на междубанковите срочни депозити в различни валути.
