O montante do empréstimo é calculado em valor bruto de quaisquer ajustamentos específicos para o risco de crédito e deve incluir todos os outros empréstimos (incluindo os fornecidos por outras instituições financeiras que sejam do conhecimento da instituição) garantidos por penhores com um grau na hierarquia igual ou superior sobre os mesmos imóveis de habitação no que respeita à penhora que garante o empréstimo. Se a informação disponível não for suficiente para determinar o grau na hierarquia dos outros penhores, a instituição deve partir do pressuposto de que esses penhores apresentam o mesmo grau de subordinação que o penhor que garante o empréstimo.

Coluna		Referência jurídica	Instruções
			b) Valor do imóvel: o valor do imóvel é a avaliação independente do mesmo num determinado momento (muito provavelmente na origem), convertida para um valor atual utilizando um índice de preços dos imóveis. A avaliação deve ser realizada de forma independente e por avaliadores que cumpram requisitos profissionais específicos. Os requisitos de elegibilidade e as normas mínimas de avaliação devem preencher as seguintes condições: — existe uma avaliação individual do imóvel que foi efetuada de forma prudente e conservadora (p. ex.: excluindo expectativas de aumento futuro dos preços e tendo em conta qualquer potencial nível de preços superior a um nível sustentável durante o período de vigência do empréstimo, por exemplo devido a uma "bolha imobiliária"); — se puder ser determinado um valor de mercado, a avaliação não deve ser superior a esse valor de mercado; — a avaliação é apoiada por documentação adequada. As instituições devem documentar os seus cálculos e fornecer a documentação à sua autoridade competente a pedido desta. As categorias de ILTV são: a) <= 25 %; b) > 25 % <= 50 %; c) > 50 % <= 75 %; d) > 75 % <= 100 %; e) > 100 % <= 125 %; f) > 125 %; g) Não aplicável.»

PARTE I: INSTRUÇÕES GERAIS

1. Os dados devem ser apresentados apenas em relação às contrapartes relativamente às quais haja uma posição em risco ou uma notação válida.

2. Os dados devem ser apresentados apenas em relação às posições em risco para as quais tenha sido aprovado um modelo interno.

3. É aplicável o seguinte à Parte II:

   a) Para os valores absolutos, deve ser comunicada a soma dos valores;

   b) Para os valores percentuais, deve ser comunicada a média ponderada, sendo utilizada a posição em situação de incumprimento (a seguir designada "EAD") como ponderador;

   c) Em derrogação à alínea b), no cálculo do fator de conversão (a seguir designado "CCF"), o ponderador utilizado deve ser a "posição em risco inicial", ou seja, o montante a que o CCF é aplicado a fim de obter a EAD, tendo em conta as técnicas de redução do risco de crédito (CRM) com efeitos de substituição a nível da posição em risco (coluna 090 dos modelos 101, 102 e 103).

PARTE II: INSTRUÇÕES RESPEITANTES AOS MODELOS

Se for aplicável mais de um método às posições em risco de uma determinada carteira, essas posições devem ser divididas e comunicadas separadamente para cada método utilizando o código da contraparte apropriado e inequivocamente definido.
040	Notação		Deve ser comunicada a hierarquia dos graus de notação interna aplicada pela instituição (do risco mais baixo até ao mais elevado, excluindo as situações de incumprimento com PD correspondente a 100 %). Deve seguir a ordem numérica 1, 2, 3, etc.
050	Data da notação mais recente da contraparte		Deve ser comunicada a data da notação mais recente da contraparte.

Coluna	Identificador	Referência jurídica	Instruções
060	PD	Coluna 010 do modelo 8.1 do anexo 1 do Regulamento de Execução (UE) n.º 680/2014 da Comissão	A PD atribuída ao grau ou categoria de devedores a comunicar deverá basear-se nas disposições do artigo 180.º do Regulamento (UE) n.º 575/2013. Para cada grau ou categoria, deverá ser comunicada a PD atribuída ao grau ou categoria específicos de devedores. Para os valores correspondentes a um agrupamento de graus ou categorias de devedores (p. ex.: posições em risco totais), deve ser indicada a PD média ponderada pelas posições em risco atribuída aos graus ou categorias de devedores incluídos no agrupamento. O valor da posição em risco (coluna 120) deverá ser utilizado para o cálculo da PD média ponderada pelas posições em risco. A PD deve ser expressa em valores entre 0 e 1. Para cada grau ou categoria de devedores, deverá ser comunicada a PD atribuída ao grau ou categoria específicos de devedores. Todos os parâmetros de risco relatados devem ser calculados a partir dos parâmetros de risco utilizados no sistema de notação interna aprovado pela respetiva autoridade competente. Não se pretende nem é aconselhável que exista uma escala básica de supervisão. Se a instituição notificante aplicar um sistema de notação único ou puder apresentar o relato segundo uma escala básica interna, deve ser utilizada essa escala interna. Caso contrário, os diferentes sistemas de notação devem ser combinados e ordenados de acordo com os seguintes critérios: a) Os graus de devedores dos diferentes sistemas de notação devem ser agrupados e ordenados a partir da PD mais reduzida atribuída a cada grau de devedor e até à mais elevada dessas PD; b) Quando a instituição utiliza um grande número de graus ou categorias, pode chegar a acordo com as autoridades competentes no sentido de comunicar um número menor de graus ou categorias. A instituição deve contactar a sua autoridade competente com antecedência, caso pretenda comunicar um número de graus diferente do número interno de graus.
070	Estado de incumprimento		O estado de incumprimento a relatar é um dos seguintes: a) Com incumprimento: posições em risco afetadas ao(s) grau(s) de notação com uma PD de 100 %; b) Sem incumprimento: posições em risco afetadas a graus de notação com uma PD inferior a 100 %.
080	Posição em risco inicial, anterior à aplicação dos fatores de conversão	Coluna 020 do modelo 8.1 do anexo 1 do Regulamento de Execução (UE) n.º 680/2014 da Comissão	Deve ser comunicado o valor da posição em risco inicial antes da tomada em consideração de quaisquer ajustamentos de valor, provisões, efeitos devido a técnicas de redução do risco de crédito ou fatores de conversão.
090	Posição em risco após efeitos de substituição das CRM e antes da aplicação dos fatores de conversão	Coluna 090 do modelo 8.1 do anexo 1 do Regulamento de Execução (UE) n.º 680/2014 da Comissão	Deve ser comunicado o montante a que o CCF é aplicado a fim de obter a EAD. Isto deve ser feito tendo em conta as técnicas de redução do risco de crédito com efeitos de substituição sobre a posição em risco.

Os ponderadores a utilizar devem ser os montantes aos quais são aplicados os CCF a fim de obter a EAD.
110	EAD	Coluna 110 do modelo 8.1 do anexo 1 do Regulamento de Execução (UE) n.º 680/2014 da Comissão	O valor da posição em risco deve ser deixado em branco, se a instituição não tiver uma posição em risco IRB relativamente a uma determinada contraparte.
120	Valor das cauções	Colunas 150 a 210 do modelo 8.1 do anexo I do Regulamento de Execução (UE) n.º 680/2014 da Comissão	Deve ser comunicado o valor de mercado da caução.

Uma instituição que utiliza uma PD contínua deve determinar, em primeiro lugar, a PD* para a PD média de cada categoria de notação e subsequentemente aplicar por categoria de notação o mesmo desvio relativo entre PD e PD* a nível da contraparte, tal como sucede para a PD média e PD* a nível de cada grau de notação. Se a proibição de ter em conta a compensação entre graus de notação suscitar uma situação em que, para um determinado grau de notação, a PD* é inferior à PD, nesse caso e para esse grau de notação, a PD será utilizada no cálculo do montante das posições ponderadas pelo risco.

INSTRUÇÕES COMUNS

As instituições devem aplicar todas as seguintes regras:

a) Salvo disposição específica em contrário na descrição da carteira, todas as posições serão contabilizadas a 13 de outubro de 2016. Uma vez contabilizadas as posições, cada carteira evoluirá durante a duração do exercício de avaliação comparativa. Além disso, os cálculos são efetuados partindo do pressuposto de que a instituição não tomará qualquer medida para gerir a carteira durante todo o período do exercício de avaliação comparativa. Salvo indicação expressa em contrário nas especificações de uma determinada carteira, os preços de exercício de posições opcionais devem ser determinados em relação aos preços de mercado do instrumento subjacente, conforme registados aquando do encerramento do mercado a 13 de outubro de 2016;

b) Para efeitos da validação do exercício de avaliação comparativa, a avaliação de cada carteira deve ser apresentada à autoridade competente da instituição até [data de entrada em vigor]. A avaliação de mercado inicial (IMV) é a soma do valor de mercado no dia de contabilização com o saldo não realizado (isto é, os lucros e perdas já ocorridos mas ainda não realizados ou que seriam realizados se a posição fosse encerrada (ou "liquidada")) entre a data de contabilização e a data e hora da avaliação. Assim, a IMV corresponde ao valor a preços de mercado à data e hora da avaliação. A avaliação deve ser efetuada no dia 27 de outubro de 2016 às 17h30 CET (16h30 GMT);

c) Os riscos das posições devem ser calculados sem ter em conta os custos de financiamento;

d) Na medida do possível, o risco de crédito de contraparte deve ser excluído para efeitos de avaliação dos riscos das carteiras.

e) O valor correspondente a 99 % do VaR a 10 dias deve ser calculado numa base diária. O valor em risco em situação de esforço ("sVaR") e os requisitos de fundos próprios para riscos adicionais ("IRC") podem ser calculados com uma periodicidade semanal. O sVaR e o IRC devem basear-se nos preços de fim de dia de cada sexta-feira durante o período do exercício de avaliação comparativa;

f) Para cada carteira, os resultados devem ser expressos na moeda de base da carteira, como previsto nas secções abaixo;

g) Para as transações que incluem posições longas sobre *swaps* de risco de incumprimento ("CDS"), deve assumir-se que é paga uma comissão inicial na aquisição da posição, de acordo com as convenções do mercado. Deve assumir-se que as datas de vencimento de todas as posições sobre CDS no exercício seguem as datas convencionadas de fecho trimestral;

h) As especificações suplementares necessárias para calcular os preços exigidos para as posições sobre CDS devem ser conformes com as normas e convenções de mercado normalmente aplicáveis.

i) Deve ser utilizada a data de vencimento que permita que a transação se aproxime o mais possível do prazo de vencimento especificado.

j) No que respeita a informações importantes sobre as especificações do produto que não sejam expressamente previstas no presente anexo, os pressupostos utilizados, incluindo a convenção sobre a contagem dos dias, bem como a possibilidade de optar por um instrumento negociável e líquido, quando autorizada, devem ser fornecidos em conjunto com os resultados.

k) As abreviaturas ATM, OTM e ITM referem-se à posição relativa do preço atual ou futuro do ativo subjacente a um derivado quando comparada com o preço de exercício desse derivado (a chamada "*moneyness*"). ATM significa "*at the money*" (opção com valor intrínseco equivalente), OTM significa "*out of the money*" (opção com valor intrínseco negativo) e ITM significa "*in the money*" (opção com valor intrínseco positivo);

l) Todas as opções serão consideradas como se fossem negociadas no mercado de balcão ("OTC"), salvo disposição específica em contrário na carteira;

m) O calendário normal convencionado para as opções OTC deve ser respeitado (ou seja, os prazos de vencimento são o dia útil seguinte a um dia que não seja um dia de negociação). O calendário para as opções segue os seguintes moldes: o prazo de vencimento de uma opção a *n* meses ocorre dentro de *n* meses. Se as opções expirarem noutro dia que não um dia de negociação, as instituições ajustam a data de expiração em função do dia útil, de acordo com as práticas normais do mercado;

n) Todas as opções OTC são tratadas do seguinte modo:

— como opções "americanas" no que respeita às matérias-primas e às ações uninominais;

— como opções "europeias" no que respeita aos índices de ações, operações cambiais e opções sobre *swaps* ("*swaptions*");

o) Relativamente a todas as opções, deve excluir-se o prémio dos cálculos do valor de mercado inicial, pelo que as opções devem ser consideradas "*a descoberto*";

p) No contexto das Carteiras de Negociação de Correlação ("CTP"), "IM" representa as medidas de risco resultantes dos cálculos do modelo interno para a CTP, em conformidade com o artigo 377.º do Regulamento (UE) n.º 575/2013. Corresponde ao valor de todos os riscos de preço ("APR") indicado no anexo VI do presente regulamento de execução.

q) Para as posições expressas numa moeda de base comum mas compostas por um ou mais instrumentos denominados numa moeda diferente, o valor de mercado inicial ("IMV") deve ser convertido para a moeda de base comum da carteira utilizando a taxa à vista do índice cambial ("FX") adequado no final do dia de contabilização (13 de outubro de 2016). A moeda de base comum da carteira que foi utilizada para converter o IMV deve também ser utilizada para os resultados dos lucros e perdas ("P&L") e para as medições do risco e da tensão dos mercados (VaR, sVaR, IRC, APR), utilizando a taxa de câmbio correspondente e apropriada;

r) Na contabilização de todas as posições, as instituições devem respeitar as convenções de mercado apropriadas, salvo disposição em contrário. Nas seções seguintes, por "longo" entende-se "comprar" e por curto "vender". No que respeita aos CDS, "longo" corresponde à "compra de proteção" e "curto" à "venda de proteção", de acordo com a prática normal no mercado;

s) Quando um instrumento é objeto de uma operação empresarial, incluindo o exercício de uma opção de compra pelo emitente, um incumprimento ou qualquer situação similar, as instituições devem excluir esse instrumento da carteira, juntamente com quaisquer CDS ou opções conexos.

t) A expressão "*on-the-run*", quando utilizada em relação a um índice, faz referência à *tranche* mais líquida e mais facilmente negociável desse índice em concreto disponível no mercado. As instituições devem comunicar a sua escolha de índice, juntamente com os resultados associados, nas caixas de texto apropriadas dos modelos;

u) A *Euro Interbank Offered Rate* ("EURIBOR") é a taxa calculada pelo Instituto dos Mercados Monetários Europeus com base nos diferentes prazos de vencimento dos depósitos interbancários a prazo em euros;

v) A taxa do mercado monetário interbancário de Londres ("LIBOR") é a taxa calculada pela Intercontinental Exchange com base nos diferentes prazos de vencimento dos depósitos interbancários a prazo em moedas diferentes;
