Instituten uppmanas att dokumentera sina beräkningar och på begäran redovisa dokumentationen för sina behöriga myndigheter. Kategorierna för belåningsgrad är följande: a) <= 25 %; b) > 25 % < = 50 %. c) > 50 % < = 75 %. d) > 75 % < = 100 %. e) > 100 % < = 125 %. f) > 125 %; g) Ej tillämpligt.”

1. Uppgifter ska endast lämnas för motparter med exponering eller ett giltigt kreditbetyg.

2. Uppgifter ska endast lämnas för exponeringar för vilka en intern modell har godkänts.

3. Följande gäller för del II:

   a) För absoluta värden ska summan av värdena rapporteras.

   b) För procentuella värden ska det vägda genomsnittet rapporteras, varvid exponering vid fallissemang (nedan kallat *EAD*) ska användas som vikt.

   c) Som ett undantag från led b ska den vikt som används vid beräkning av konverteringsfaktorn (nedan kallad *KF*) vara ”den ursprungliga exponeringen”, dvs. det värde på vilket en konverteringsfaktor tillämpas för att beräkna EAD, sedan kreditriskreduceringsmetoder beaktats som får substitutionseffekter på exponeringen (kolumn 090 i mallarna 101, 102 och 103).

GEMENSAMMA INSTRUKTIONER

Ett institut ska tillämpa följande:

a) Om inget annat uttryckligen anges i portföljbeskrivningen ska alla positioner bokföras per den 13 oktober 2016. Så snart positionerna har bokförts åldras varje portfölj under den tid riktmärkningen pågår. Alla beräkningar ska dessutom utgå från antagandet att institutet inte aktivt förvaltar portföljen under hela den tid riktmärkningen pågår. Om inget annat uttryckligen anges i specifikationerna för en viss portfölj ska lösenpriser för optionspositioner fastställas relativt de priser på underliggande tillgångar som observeras vid marknadsstängning den 13 oktober 2016.

b) Värderingen av varje portfölj ska senast [dag för ikraftträdandet] lämnas till institutets behöriga myndighet för validering före riktmärkningen. Initial marknadsvärdering innebär summan av marknadsvärdet vid bokningsdagen och det orealiserade saldot (dvs. vinst eller förlust som har gjorts men ännu inte realiserats eller som skulle realiseras om positionen avräknades (eller avvecklades)) mellan bokningsdagen och dag och tidpunkt för värderingen. Initial marknadsvärdering betyder därför mark-to-market värdet för dag och tidpunkt för värderingen. Värderingen ska utföras den 27 oktober 2016 kl. 17:30 CET (16:30 GMT).

c) Riskerna i positionerna ska beräknas utan hänsyn till finansieringskostnaderna.

d) Motpartskreditrisken ska i möjligaste mån exkluderas när riskerna i portföljerna värderas.

e) VaR-värdet över 10 dagar med en konfidensnivå på 99 % ska beräknas varje dag. Ett stressjusterat VaR-värde (nedan kallat *sVaR*) och *IRC* (Incremental Risk Charge, dvs. kapitalkrav för tillkommande fallissemangs- och migrationsrisk) kan beräknas på veckobasis. sVaR och IRC ska baseras på stängningskurserna varje fredag under den tid riktmärkningen pågår.

f) Resultatet ska rapporteras för varje portfölj i portföljens basvaluta på det sätt som föreskrivs i tabellerna nedan.

g) För transaktioner som innefattar långa positioner i kreditswappar antas en omedelbar direkt avgift ha betalats i enlighet med marknadskonventionerna för att gå in i positionen. Förfallodagen för alla kreditswappar som omfattas av riktmärkningen ska antas följa konventionella kvartalsvisa slutdatum.

h) Ytterligare specifikationer som är nödvändiga för att göra de prissättningsberäkningar som krävs för positioner i kreditswappar ska fastställas enligt allmänt vedertagna marknadsnormer och konventioner.

i) Det förfallodatum som säkerställer att transaktionen ligger närmast den angivna löptiden ska användas.

j) När det gäller väsentliga uppgifter i produktspecifikationen som inte uttryckligen fastställs i denna bilaga ska de antaganden som har använts, inbegripet dagräkningskonvention och val av omsättningsbara och likvida instrument där tillämpligt, lämnas tillsammans med resultaten.

k) Förkortningarna ATM, OTM och ITM avser derivatets ”moneyness” (dvs. förhållandet mellan priset på det underliggande och lösenpriset på derivatet). ATM står för ”at the money”, OTM för ”out of the money” och ITM för ”in the money”.

l) Om inget annat uttryckligen sägs ska alla optioner behandlas som om de handlas över disk (over the counter, OTC).

m) Standardtidkonventioner för OTC-optioner ska följas (dvs. slutdagen ska vara den bankdag som följer på en dag som inte är handelsdag). Tidkonventioner för optioner ska vara som följer: Löptiden för en option på *n* månader ska anges i *n* månader. Om optioner förfaller på en dag som inte är handelsdag ska förfallodagen flyttas till närmast påföljande bankdag i enlighet med sedvanlig marknadspraxis.

n) Alla OTC-optioner ska behandlas som

— amerikanska, om de avser aktier i bara ett företag eller råvaror, och

— europeiska, om de avser aktieindex, valutor eller swaptioner.

o) För alla optioner ska premien från beräkningen av det initiala marknadsvärdet exkluderas (dvs. optioner ska vara ”nakna”).

p) Vad gäller korrelationshandelsportföljen avses med ”IM” riskmått som är en följd av interna modellberäkningar för korrelationshandelsportföljer enligt artikel 377 i förordning (EU) nr 575/2013. Det anges som alla prisrisker i bilaga VI till denna genomförandeförordning.

q) För positioner som anges i en gemensam basvaluta men som består av ett eller flera instrument i en annan valuta, ska den initiala marknadsvärderingen räknas om till den gemensamma basvalutan för portföljen enligt gällande växelkurs vid bokföringsdagens slut (13 oktober 2016). Samma gemensamma basvaluta för portföljen som användes för att konvertera den initiala marknadsvärderingen ska användas för resultaträkningen samt risk- och stressjusterade åtgärder (VaR, sVaR, IRC, APR) genom att använda motsvarande och lämplig växelkurs.

r) Om inget annat anges i instruktionerna avseende portföljen ska lämpliga marknadskonventioner följas när positionerna bokförs. I följande avsnitt betyder ”lång” ”köp” och ”kort” betyder ”sälj”. För positioner i kreditswappar betyder ”lång” ”köp skydd” och ”kort” ”sälj skydd” enligt ordinarie marknadspraxis.

s) Om ett instrument påverkas av en företagshändelse (ett köp av emittenten, ett fallissemang osv.) ska det exkluderas från portföljen tillsammans med eventuella kreditswappar eller optioner som är kopplade till instrumentet.

t) ”on-the-run” med avseende på en indexserie betyder den mest likvida och handelsbara serien av det specifika index som är tillgängligt på marknaden. Instituten ska meddela sina val av indexserier tillsammans med relaterade resultat i relevant textruta i mallarna.

u) Euribor (Euro Interbank Offered Rate) är den ränta som beräknas av European Money Markets Institute för interbanklån i euro med olika löptider.

v) Libor (London Interbank Offered Rate) är den ränta som Intercontinental Exchange beräknar för interbanklån i olika valutor och med olika löptider.
